What is pvscm system cost?

The PVSCM system cost is the price paid by the system owner to the system developer. Any tax credit realized by the owner is excluded and must be considered separately. Tariffs paid on imported hardware are treated as temporary market distortions that increase MMP but not MSP.

How do market analysts evaluate the cost of PV systems?

Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors are evaluated each year.

How many inverters does a PV system use?

The DC cables are connected to 19utility-scale central inverters, each rated at 4 MW ac, giving the PV system a rated AC power output of 76 MW ac, which corresponds to an inverter loading ratio of 1.32. The inverters are made in Europe in a plant that produces 250 of them each year. These inverters are not subject to import tariffs.
