What if I need more energy than my solar panels produce?

If you need more energy than your solar panels produce, you will source the electricity from the grid through the meter as you normally would. Your home is connected to both sources of electricity - solar panels and the traditional grid. Your primary source of energy will be photovoltaic.

Can solar power be used at home?

To bridge that gap, an inverter converts DC into AC so your solar power is usable at home. Storage comes next. Batteries allow homeowners to store excess energy for use at night or during outages or simply when there is intermittent sunshine, and can be sized based on current and future consumption.

Can a solar energy system run from the grid?

If you have a grid-tied solar energy system, electricity can run both to and from the power grid. If you live in an area with net metering, you can even earn electric bill credits from your utility company when you send excess electricity to the grid.
