Are battery energy storage systems safe?

Battery energy storage systems (BESS) are using renewable energy to power more homes and businesses than ever before. If installed incorrectly or not safely commissioned, they pose serious safety risks. A BESS must be installed by a properly licenced electrician. What are battery energy storage systems?

Should battery storage be co-located with solar or wind energy projects?

Recent developments in battery storage technology and the drop in availability of renewable incentives, have led to a focus on co-locating battery storage alongside solar or wind energy projects.

Should batteries be used for domestic energy storage?

The application of batteries for domestic energy storage is not only an attractive 'clean' option to grid supplied electrical energy, but is on the verge of offering economic advantages to consumers, through maximising the use of renewable generation or by 3rd parties using the battery to provide grid services.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

Are lithium battery fires a safety concern?

While BESS technology is designed to bolster grid reliability, lithium battery fires at some installations have raised legitimate safety concerns in many communities. BESS incidents can present unique challenges for host communities and first responders:
