

Comparison of energy storage requirements in the Republic of South Africa

Is energy storage a viable option for South Africa's power system?

In the longer term,however,at higher levels of variable generation,flexibility requirements will significantly increase demanding interventions to ensure secure and cost-efficient operation of the South African power system. Energy storage was specifically noted to be highly suitablefor this purpose.

How can energy storage be regulated in South Africa?

Identification of priority energy storage use cases and applications for the South African context to inform development of the corresponding regulatory framework. Amendment of the grid code to be technology agnostic and review the complete set of codes for optimal integration of ESS at all levels.

Can energy storage technology be adopted in South Africa?

However, without increased financial support from both the private and public sectors, the widespread adoption of energy storage technology remains impeded. Another significant challenge faced by energy storage adoption in South Africa is the regulatory framework that governs the energy sector.

Can stationary energy storage solve South Africa's power system challenges?

While the potential of stationary energy storage to address the existing power system challenges, are highin South Africa, the current uptake of the technology is limited to customer-sited, behind-the-meter applications (largely for back up services).

What are the economic implications of energy storage in South Africa?

The economic implications of energy storage in South Africa are substantial. Energy storage systems can provide a buffer against price volatility in the energy market, resulting in more stable electricity costs for consumers.

Does South Africa's policy environment recognise energy storage?

The literature review and case studies revealed that a policy environment that recognises and signals the strategic value of energy storage can direct and enable development and investment in the sector. South Africa's policy environment, represented by the IRP 2019, recognises ESS but only as a generation asset.
