

## Distributed Intelligent Energy Storage Industry Exchange

How to optimize energy storage systems for multiple value streams?

Optimizing energy storage systems for multiple value streams and maximizing the value of storage assets depends on intelligent operating systemsthat analyze large datasets and make real-time decisions, automatically responding to changing conditions.

Why do we need a secure energy dataspace?

We need secure systems that can guarantee the seamless integration of distributed storage while also protecting sensitive information and maintaining grid reliability. "One of the primary goals of the energy dataspace framework is to establish an environment of trust and security.

How can interstore accelerate the integration of data spaces in the energy sector?

INTERSTORE presents a new framework to accelerate the integration of data spaces in the energy industry. An energy data space frameworkdeveloped within the EU-funded INTERSTORE project is expected to play a pivotal role in accelerating the integration of data spaces within the energy sector.

Why does the energy sector need data sharing?

The energy sector needs secure and efficient data sharing now more than ever. Challenges such as the rapid growth of renewable energy sources and smart grid technology and the rising demand for energy flexibility all point to the need for real-time, data-driven collaboration.

What is a data space middleware & energy dataspace connector?

In addition, it has two core elements: the data space middleware and the energy dataspace connector. These features enable a complete end-to-end data exchangeamong energy stakeholders, enabling them to collaborate through standardised, secure and trusted data-sharing mechanisms.

Who benefits from energy storage?

Anyone that consumes,manages,or distributes energy directlybenefits from the flexibility that energy storage delivers - whether that's the flexibility to buy energy at the cheapest times,to use more renewable energy,to sell energy at the best price,or to switch to backup power during a grid outage.
