Choose your state and options to display the price for your state. Double Metal Carports for 2 Cars: Boxed Eave

Why should you choose A2 solar design carports?

a2-solar skillfully design every carport down to the finest detail in order to ensure for maximum green electricity yields and long-life performanceas expected from a top German brand product. This is why our solar design carports are featured by:

What is a dual-glass module?

Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each. Some manufacturers, in order to reduce the weight of the modules, have opted for a thickness of 1.6 mm. DualSun has chosen to stay with a thickness of 2.0 mm for reasons explained below.

Why are double glass modules symmetrical?

Mechanical constraints on cells: the fact that the structure of the double glass modules is symmetrical implies that the cells are located on a so-called neutral line, the upper part of the module being in compression during a downward mechanical load and the lower glass surface being in tension.

Can the a-frame boxed eave double carport shelter be closed?

As long as the unit is tall enough to accommodate garage doors, the A-Frame boxed eave double carport shelter can be have all walls closed to create a garage or workshop at any time. We can also a provided enclosed utility storage on the end of the carport or down the center of the double carport.

Among the various mounting structure available, the double post solar carport stands out due to its stability, efficiency, and aesthetic appeal. In this article, we will explore ...

Compared with traditional monocrystalline silicon photovoltaic modules, double-glass double-sided modules have the advantages of a long life cycle, low attenuation rate, weather ...
