

## How much wind power does Sweden s communication base stations generate

How much wind energy will Sweden need in 2040?

In similar fashion, the Swedish environmental protection agency and the Swedish energy agency have produce a strategy for the sustainable development of wind energy expansion. It states that an additional 100 TWhof wind energy will be needed until the year 2040, of which 80 TWh on land.

### How many wind turbines are there in Sweden?

Wind power has been the fastest growing source of renewable energy around the world in recent years, and capacity continues to expand in Sweden. In 2000, Swedish production totalled 0.5 TWh, for 2022 that figure was just over 33 TWh. Today, there are more than 4,700 wind turbines in Sweden. The largest source of bioenergy in Sweden is the forest.

#### How much wind energy does Sweden produce?

Sweden produces 32,5 TWhfrom wind energy, which accounts for 24.2% of the country's electricity consumption. In 2016, the Swedish government, the Moderate Party, the Centre Party, and the Christian Democrats reached an agreement on Sweden's long-term energy policy. However, in 2020 the Moderate party and Christian Democrats left the agreement.

### What is the capacity factor of wind energy plants in Sweden?

In 2014 the average capacity factor of the installed facilities in Sweden was 24%. The plants commissioned in 2020 have a capacity factor of 37%. Wind energy has been around for a long time and definitely belongs to the category of well tested and established energy generating technologies.

#### How much wind power does Sweden produce in 2022?

Wind power capacity in Sweden increased by 2,200 MW in 2022. Sweden produces 32,5 TWhfrom wind energy, which accounts for 24.2% of the country's electricity consumption. In 2016, the Swedish government, the Moderate Party, the Centre Party, and the Christian Democrats reached an agreement on Sweden's long-term energy policy.

#### Will Sweden's wind power increase in 2021?

In 2021, the Swedish government ordered new transmission to be planned for offshore wind connections. Sweden's wind power generation is set for a substantial increase, expected to rise by about 70% from 27.4 terawatt hours (TWh) in 2021 to 46.9 TWh by 2024, according to forecasts by the Swedish Energy Agency.
