

## How to replace the circuit breaker in the base station power cabinet

How do I replace a circuit breaker?

RELATED: STEP 1: Mark the breaker in need of replacement and shut off the main power. Set up a flashlight or work light to illuminate the electrical panel. Before removing the panel cover, identify the circuit breaker in question.

## Should you replace a circuit breaker box?

Safety is a must when working with any type of electrical devices and outlets. Circuit breaker boxes and panels house a lot of electricity so safety precautions should be taken any time you are working in or around the circuit breaker box. Before you try to replace a circuit breaker, you will need to have the right tools for the job.

## Do I need to replace a main breaker?

If you need to replace a main breaker replace the entire electrical panel, it's best to call a professional. The only way to shut off the power to a main breaker is to call the utility company, so do not attempt to do this on your own. Also, understand that even with the main breaker off, there is still voltage in the panel.

## How do you remove a circuit breaker box?

Holding the edges, lift the faceplate directly away from the breaker box before lowering it. Always remove the panel by pulling it towards you and then sliding it down. Don't let it touch or bump anything inside the circuit breaker box as you are removing it.

## How do I Reset my breaker?

Turn off the new breaker by flipping its reset lever to the OFF position. If the black insulated circuit wire connected to the breaker is folded tightly along the sides of the panel, carefully extend it out from the panel, being careful not to touch any other wires or the panel itself.

#### How do I replace a GFCI breaker?

If you are replacing an AFCI or GFCI (or AFCI/GFCI combination breaker), connect the white neutral circuit wire to the corresponding screw terminal on the breaker. This terminal may be marked NEUTRAL or LOAD NEUTRAL. Connect the coiled white wire attached to the circuit breaker to a screw terminal on the neutral bus bar in the panel.
