

How to use high temperature battery cabinet

What temperature should a battery be stored?

When it comes to temperature, battery storage is actually pretty easy. The ideal temperature for alkaline batteries is about 60°F, while the preferred range for lithium batteries is between 68°F and 77°F. That being said, all batteries will keep just fine as long as they're within the general range of what would be considered room temperature.

How can a VRLA battery be optimised in hot operating temperatures?

There are two main methods for optimising the lifecycle of a VRLA battery in hot operating temperatures: Cooling measures can be incorporated into a system design to ensure a VRLA battery achieves the correct capacity and maintains an optimal design life.

Are lithium batteries a good choice for hot operating environments?

So it's easy to see why Lithium batteries are the superior choice for hot operating environments. In 2013, Valen first had experience with installing Lithium batteries in solar-powered systems in Northern Western Australia where the average daily temperature is around 40 degrees.

Can hot temperatures affect Deep cycle VRLA batteries?

The impacts of hot temperatures on deep cycle VRLA batteries are of particular concern in Australia where temperatures in the Summer can reach over 50°C in certain remote areas. Managing operating temperatures becomes even more crucial when batteries are enclosed in cabinets without the correct ventilation and placed in direct sunlight.

Should batteries be stored in the freezer?

This debunks the common myth that batteries should be stored in the freezer. Sub-freezing temperatures can prematurely drain batteries and reduce their effectiveness. That being said, it's okay to refrigerate them to protect them from extreme heat; just make sure they have time to return to room temperature before you use them.

What temperature should a VRLA battery run at?

When the weather starts heating up, the team at Valen often get asked this question. The answer depends on the system specifications the battery is being installed into and the battery technology that is chosen for the system. For deep cycle VRLA batteries, the most common operating temperature specified with design life is 25°C.
