

## Hundreds of billions of subsidies for outdoor power supplies

Do energy subsidies help energy supply chains and technologies?

Our analysis of energy subsidies focuses on the extent of federal financial supportoffered to various electricity supply chains and technologies, including gas turbines, nuclear power plants, and wind turbines--from mine-mouth to wall socket.

Should renewable energy subsidies be extended?

There are several reasons why renewable energy subsidies should not be extended. Over \$100 billion has already been spent on these subsidies. Renewable energy resources--primarily wind and solar--have received subsidies through the tax code since 1979, with most of the spending occurring in the last decade.

Is the energy industry in the US subsidized?

There is ongoing debate about subsidies in the energy industry in the US. According to the American Petroleum Institute, an oil and gas trade association, their industry isn't subsidized; however, the Nuclear Energy Institute presents a different perspective.

What are the different types of energy subsidies?

The most obvious subsidies are the direct expenditures and R&D supportfrom the federal budget. Tax expenditure subsidies are targeted tax incentives that producers or consumers of specific forms of energy receive. In this case, the government does not spend money, but it loses revenue that it would have otherwise received.

Is renewable energy subsidized in the US?

Renewable energy either receives disproportionate largess or is underfunded, depending on whom you ask. The American Petroleum Institute, an oil and gas trade association, argues that their industry isn't subsidized. Contrary conclusions are reached by the Nuclear Energy Institute.

Do federal subsidies for renewables lower electricity costs?

Federal subsidies for renewables have not decreased electricity costs for consumers. The ITC and PTC subsidies have only lowered out-of-pocket costs for renewable project developers.
