

Liberia's demand for portable power

Why is reliable energy important in Liberia?

The report offers a comprehensive analysis of recent economic developments in Liberia, underscoring the crucial role of reliable energy in fostering sustainable growth. The update highlights key advancements in Liberia's energy sector, including notable progress in power generation and the expansion of energy access.

What is happening in Liberia's energy sector?

The update highlights key advancements in Liberia's energy sector, including notable progress in power generation and the expansion of energy access. However, despite these gains, the country faces significant power shortages, calling for substantial investments to achieve reliable, affordable, and sustainable energy access for all Liberians.

How can Liberia improve energy security?

One strategy is to diversify the energy mix by increasing the share of domestic renewable energy sources, such as solar and wind power, for electricity generation. By harnessing these indigenous and sustainable energy resources, Liberia can decrease its reliance on imported fuels and enhance its energy security.

Will Liberia get a 20 MW power supply in 2020?

In addition, the government signed a Power Purchase Agreement with a solar energy company to provide the country with 20 MW of electricity in 2020. Despite these efforts, much work remains to be done to improve access to reliable and affordable energy in Liberia.

What are the challenges to energy access in Liberia?

The primary challenge to energy access in Liberia is the limited and underdeveloped energy infrastructure. The lack of adequate power generation, transmission, and distribution systems contributes to this low access rate. The electrification rate is significantly lower in rural areas, where most of the population resides.

What are the main energy sources in Liberia?

The primary energy sources in Liberia are traditional biomass fuels such as firewood and charcoal, which account for more than 80 % of the country's total energy consumption [5,12,13]. Petroleum products, including gasoline and diesel, account for about 10 % of energy consumption, while hydroelectric power accounts for just over 6 %.
