The railway handles cargo that is either too large or unsuitable for transit through the Panama Canal. This is particularly relevant for specialized shipments that cannot fit through the canal's locks or may be subject to restrictions.

Why is the railway a good alternative to the Panama Canal?

The railway facilitates intermodal container transportation, allowing cargo to be seamlessly transferred between ships and trains. It's a great alternative to the Panama Canal, offering a reliable way of transporting time-sensitive or high-value shipments, especially during a crisis like the canal drought.

How many containers can a rail freight container hold?

Each is capable of accommodating an average of 75 containers. A typical mix includes sixty 40ft containers and fifteen 20ft containers. If you're fed up with the current canal drought situation or just looking for alternatives to the Panama Canal, rail freight is your best option.
