What is a string inverter?

String inverters are a tried-and-true inverter technology and one of the oldest options available in the market today. What are string inverters? How do they work? A string inverter system aggregates the power output of groups of solar panels in your system into "strings";

Are string inverter kits available for roof mounted systems?

*String inverter kits are generally not available for roof mounted systems due to National Electrical Code standards. A string inverter is a central unit with inputs for strings (groups) of solar panels. In string inverter systems, solar panels are chained together in series, with the final panel in the chain plugging into an input on the inverter.

Are string inverters a cost-effective solution for a home solar installation?

String inverters are the most cost-effective solution for a home solar installation. For homes without any shading issues, string inverters provide a quick and easy solution to install solar. Each kit comes complete with tier-1 solar panels, a grid-tie string inverter, Ironridge racking, and free system monitoring.

What happens if a string inverter is underproducing energy?

Because panels are connected in strings to the inverter, if one or more panels are underproducing energy (due to shading, dirt, or some other factor), the output of the rest of the panels on that string will be reduced. A string inverter is typically capable of handling multiple strings of panels attached to it.
