## SOLAR PRO.

## **Spherical Solar System**

List of spherical objects in the Solar System In 2006, the International Astronomical Union defined a planet as a body in orbit around the Sun that was large enough to have achieved hydrostatic ...

The Oort Cloud is a spherical shell surrounding our solar system, primarily serving as a reservoir for long-period comets. It extends from about 2,000 to 100,000 AU from the Sun, ...

From the major planets in our Solar System to the very Sun itself, the sphere is the most common shape of celestial bodies, but why are the planets round? The short answer as to why the ...

Bottom line: Planets are spherical because when they form, the matter is distributed evenly around the center due to gravity. They are not perfectly spherical: some of ...

Mercury and Venus are the roundest of all. They are nearly perfect spheres, like marbles. But some planets aren't quite so perfectly round. Saturn and Jupiter are bit thicker in ...
