

Tax rate for Austrian energy storage power exports

What is Austria's energy supply based on?

The Austrian internal energy supply is based on a balanced mix of energy sources. An estimated one-third of Austria's energy needs is supplied by domestic production and the remainder is imported from abroad.

Which energy sources are used in Austria?

Hydrocarbons (oil and gas) make up the majority of imports. Therefore, the primary energy sources used to cover Austria's energy consumption are diverse: in 2023, 35.7 per cent oil, 18.5 per cent gas, 36 per cent renewable energies, 7.7 per cent coal, and 2.1 per cent combustible waste were used.

How did Russia affect Austria's energy policy?

Generally, Austria's dependency on Russian gas, and the increase in gas and electricity prices triggered by the gas shortage and the price-building mechanism in the European wholesale electricity market, strengthened the political movement to reduce the dependency on hydrocarbons and promote renewable energy sources.

Does Austria still produce nuclear energy?

As a result of the federal law for a non-nuclear Austria, the production of nuclear energy has been banned in the country since 1978. According to this, hydrocarbons (oil and gas) still dominate Austria's energy mix. Austria produces oil and gas in economically relevant quantities.

Do hydrocarbons still dominate Austria's energy mix?

According to this, hydrocarbons (oil and gas) still dominate Austria's energy mix. Austria produces oil and gas in economically relevant quantities. The amounts produced cover 7.2 per cent of the domestic demand annually, while the remainder is imported.

How much natural gas does Austria import from Russia?

Concerning natural gas, Austria has always pursued a procurement strategy that is characterised by long-term contracts and a dominant supply country. Therefore, in 2022, Austria imported approximately 80 per centof its gas from Russia.
