

The first batch of power base stations in Northern Europe

Nearly 800 American technicians, with over 2,000 local workers, built it in six months, all the equipment down, to the last nut and bolt, coming from the U.S.A. American and British sailors ...

Overview Transformers and alternating current Early transmission Specialized systems Early high voltage exterior lighting Direct current lighting Availability of large-scale generation High voltage direct current transmission When George Westinghouse became interested in electricity, he quickly and correctly concluded that Edison's low voltages were too inefficient to be scaled up for transmission needed for large systems. He further understood that long-distance transmission needed high voltage and that inexpensive conversion technology only existed for alternating current. Transformers would play the d...
