

Which countries are covered by Belgian communication base station EMS

How does EMS work in Belgium?

The emergency call centre then sends the most appropriate EMS resources to the patient. After on-scene care, the patient will typically be transported to the emergency department (ED) of a hospital for further treatment. The responsibility of the Belgian EMS system ends with the receiving hospital taking charge of the patient.

Why did the Belgian government invest in the ambulance system?

Hospitals, physicians and ambulances in this 900-system were placed under the positive obligation to provide care to and to transport patients. Lastly, the Belgian government invested in a large number of standardized ambulance vehicles which were lent by the country's health ministry to the various services active in the system.
