Are microinverters a good choice for solar panels?

Microinverters are best for solar systems that will experience shading or are installed on more complex roofs. If you think you'll want to expand your solar panel system someday, then microinverters are also a good choice, as they make it easier to add solar panels. The most popular brand of microinverters is Enphase.

What are solar microinverters?

Microinverters are small electronic devices that convert direct current (DC) into alternating current (AC). One microinverter could fit the palm of your hand. The main factor differentiating microinverters from traditional inverters is that they operate at the panel level rather than the solar panel system as a whole.

What are the best solar micro-inverters in 2025?
